

Accountability guide edits — review (strict citation standard)

14 proposed edits across 8 guides. One earlier edit (NXT-65306, GUIDE-021) was **withdrawn** under the strict standard because its AC field is - (empty) and Release Notes are blank — no verbatim source to quote.

Standard applied to every edit in this document:

- Every proposed claim traces to a **verbatim quote** from Acceptance Criteria or Release Notes.
 - Verbatim quotes appear in blockquotes (>).
 - Anything not directly quotable is either labeled as **Interpretation** or flagged as an **Open question**.
 - Where Description supplies a specific detail (UI label, menu path, value) not echoed in AC or RN, the detail is **not** silently included — it is surfaced as an open question.
 - **Internal jargon is translated, not quoted.** AC sometimes uses dev-team shorthand (system-setting codes like BABECL, abbreviations like CRUD). These are flagged in an Interpretation note and rendered into customer-facing language in the proposed text. The original code is preserved in the Interpretation note and Open questions so the SME knows what to look up.
-

Edit 1 — GUIDE-011 (Edit and Add Transactions)

Section: *Change Payment Amount or Method* — paragraph inserted under step 1. **Citation:** NXT-54012 (resolved 2024-11-04)

Source — AC (verbatim):

- * Editing Transactions → Partial Payment is possible, if BABECL and Purchase Restrictions are not triggered
- * User is given an error message if BABECL or Purchase Restrictions are blocking it when they try to Save
- * Special Permission for Override is added
- ** If user has the permission, they get an Override/Cancel option on the error message
- ** If they Override, allow the edit to go through

Source — Release Notes (verbatim):

We have made an update to the Add/Edit Transaction screen to allow for a partial payment on a transaction - where the funds may be both from cash, and a debit at the same time. This functionality has always been available at the POS, but is now available while adding or editing a transaction via the website.

Current text in the guide:

1. On the right-hand panel, enter the Amount Tendered, Deposit Amount, or Change Returned in the New column, if needed

Interpretation note: AC's BABECL is an internal system-setting code (dev-team shorthand); the customer-facing setting name is not stated in AC or RN. Rendered in the proposed text below as "the district's charge-limit setting" so guide readers understand what's being checked. AC's "Special Permission for Override" similarly lacks a customer-facing permission label; rendered generically as "a new override permission."

Proposed insert (immediately under step 1):

The Add/Edit Transaction screen allows partial payment on this screen (funds may be both from cash and a debit at the same time). If the district's charge-limit setting or the patron's Purchase Restrictions are triggered, the user sees an error message; a new override permission, when held, surfaces an Override / Cancel option on that error message, and choosing Override allows the edit through.

Open questions:

- Customer-facing name of the BABECL system setting as shown in System Settings UI.
- Which Payment Method values support partial payment, and which require full tender? (*Ticket Description names Cash/Check vs. Card — not in AC or RN.*)
- Exact role-permission label as displayed in the Role Permissions admin UI? (*Description gives "Override Restrictions/Charge Limits When Editing Transactions" — not in AC or RN.*)

Edit 2 — GUIDE-013 (Reconciliation)

Section: Find a CLOSED Session — steps 1 and 2. **Citation:** NXT-60921 (resolved 2025-06-04)

Source — AC (verbatim):

- * Site selector updated
- * Date selector updated
- * Separate tab added with Session # added as Search Filter
- ** Existing tab: Search
- ** New tab: Session #
- * 3 new columns added
- ** Available in Saved Views
- * Filtering added to 4 columns
- * Status tags colorized

Source — Release Notes (verbatim):

The Site dropdown is now a multi-select!

The Date selector has been updated to have more modern ranges. ('This Week', 'Last Week')

A Session # search tab has been added to help you find a specific session.

New grid columns - Cashier, Total Sales, and Meal Count.

Filters added to: Terminal, Cashier, Opening Balance, Closing Balance, Over/Under

Session Status tags are now color-coded.

Current text in the guide:

1. Select the Site Code/Site Name, Status, and Date
2. Click the SEARCH button

Session information displays in the table below.

Proposed replacement:

1. Select the Site Code/Site Name (the Site dropdown is a multi-select), Status, and Date (the Date selector supports ranges such as 'This Week' and 'Last Week')

A Session # search tab has been added beside the existing Search tab to help find a specific session.

2. Click the SEARCH button

Session information displays in the table below. New grid columns — Cashier, Total Sales, and Meal Count — are available, with filters on Terminal, Cashier, Opening Balance, Closing Balance, and Over/Under. Session Status tags are color-coded.

Edit 3 — GUIDE-013 (Reconciliation)

Section: New subsection appended after *Reconcile a Closed Session*. **Citations:** NXT - 36439 (resolved 2023-04-18) and NXT - 53996 (resolved 2024-08-23).

Source — NXT-36439 AC (verbatim):

- * Delete Session option added.
- ** Requires a confirmation from the user.
- ** Requires a comment.
- * Undo button available for 30 seconds before deletion begins.
- * Deletion to be done via adjustments.
- * Adjustments of all types must be available under the Transactions > Adjustments page.
- * Adjustments should use the comment from the user in this format: Session Deleted: comment
- * Rollups run afterwards.
- * Role Permission added.

Source — NXT-36439 Release Notes (verbatim):

An option to delete a session has been added. Role permissions for this have also been added.

A 30 second 'Undo' option is available after confirming the delete, but after that all transactions in the session will be adjusted off and the session will be updated to a new status of Deleted.

Support will not be able to reverse the deletion; we advise being very certain before starting the deletion process.

Source — NXT-53996 AC (verbatim):

- * Online Payment sessions cannot be deleted.
- ** User is informed why.

* Delete Session Confirmation prompt updated to tell the user how many transactions and \$\$ payments are in the session.

Source — NXT-53996 Release Notes (verbatim):

We have temporarily removed permissions to delete sessions. If you need a session removed, please contact our Support team for assistance. The permission will be returned in the future along with an option to restore a deleted session.

However, we have added in a permanent blocker to prevent sessions at Central Office from being deleted. These sessions typically contain online payments from Family Hub, along with refunds and other account-related actions taken by staff at the Nutrition Office. You will need to contact Support if one of these sessions does need to be removed.

Current text in the guide: *(no equivalent — this is a new subsection)*

Proposed new subsection:

Delete a Session

An option to delete a session has been added, gated by a role permission. Online Payment sessions cannot be deleted, and a permanent blocker prevents sessions at Central Office (which typically contain Family Hub online payments, refunds, and other account-related actions) from being deleted; contact Support if one of these needs to be removed.

1. Select the Delete Session option

A confirmation prompt requires a comment. The prompt tells the user how many transactions and dollar payments are in the session.

2. Confirm the delete

A 30-second Undo is available after confirming. After the 30 seconds, all transactions in the session are adjusted off, the session is updated to a new status of Deleted, and rollups run afterwards. Support will not be able to reverse the deletion — be very certain before starting the deletion process.

3. After deletion, the transactions appear as adjustments on the Transactions / Adjustments page

The adjustment uses the user's comment in this format: "Session Deleted: <comment>".

Source contradiction surfaced: NXT-53996's RN says delete permissions were "**temporarily removed**" pending restore-session capability; NXT-53996's AC speaks only of the **permanent** Central Office block. NXT-36439's RN treats delete as available. The proposed text reflects what AC and the permanent-block portion of NXT-53996 RN both agree on, and omits the temporary-removal sentence because NXT-54040 (Restore Session, 2024-10-25) is the path forward referenced by NXT-53996's RN but is not part of this pass.

Open questions:

- Where exactly is the Delete Session control in the UI? (*Description: "More Actions dropdown on the Reconciliation page" — not in AC or RN of either ticket.*)
- Should Restore Session (NXT-54040) be documented alongside Delete? NXT-53996's RN explicitly anticipates it; without it, this subsection may overstate finality.

Edit 4 — GUIDE-014 (Deposits)

Section: *Create Deposit Slips* — section list inserted after step 3 (between Check(s) and Summary). **Citation:** NXT-71628 (resolved 2026-05-04). *Release Notes empty for this ticket; AC is the only source.*

Source — AC (verbatim):

Add a new Credit Card Section in Summary for Deposits

- New section is automatically visible if calculated cards is > 0

- hide by default if calculated card = 0

- add button to add credit cards "Add Credit Card Deposit" where when clicked: shows new Credit Card Section as a summary section line and requires comment. Once clicked replaces itself with "Remove Credit Cards" button.

TOOLTIP: "Adds ability to track 3rd party credit card revenue to this deposit"

- When Remove button is clicked hide section and delete Card input.

- New Section that Provides space to enter in a credit card sum.

Calculate out expected credit card amount inline with new section as "Credit Cards (Expected: \$[sum])"

Adjust deposit Variance by subtracting the difference between the calculated Cards and Deposited Card Amount.

Variance sum = Variance sum - (Calculated Card - Deposited Card)

For legacy Deposit add note. New functionality is not available.

Current text in the guide:

3. Click the CREATE button

The Create Deposit Slip slide deck expands to display:

- Denominations

- Check(s)

- Summary

Proposed insert (between Check(s) and Summary):

- Credit Card Section in Summary — automatically visible if calculated cards is > 0; hidden by default if calculated cards = 0. To surface it manually, click the "Add Credit Card Deposit" button (tooltip: "Adds ability to track 3rd party credit card revenue to this deposit"); a comment is required. The button then changes to "Remove Credit Cards"; clicking Remove hides the section and deletes the Card input. The section shows an inline "Credit Cards (Expected: \$[sum])" label. Deposit Variance adjusts by subtracting the difference between the calculated Cards and the Deposited Card Amount. (On legacy Deposits, this functionality is not available.)

Edit 5 — GUIDE-014 (Deposits)

Section: *Create Deposit Slips* — step 4 trailing note. **Citation:** NXT-54193 (resolved 2024-12-26)

Source — AC (verbatim):

- * Sub-Total line added for Coins and Bills

- ** Shows the total of the Amount column. In the example above: \$0.74, \$17.00

Source — Release Notes (verbatim):

We have updated Deposit Slips to show a sub-total for coins and bills.

Current text in the guide:

4. In the Denominations section, enter the coin and bill amounts deposited

Either enter the count or specific amounts for each.

Proposed replacement:

4. In the Denominations section, enter the coin and bill amounts deposited

Either enter the count or specific amounts for each. A Sub-Total line for Coins and Bills shows the total of the Amount column.

Edit 6 — GUIDE-014 (Deposits)

Section: *Edit Deposit Slip* — step 2. **Citation:** NXT-71628 (resolved 2026-05-04). *Release Notes empty; AC is the only source.*

Source — AC (verbatim):

Make the Bank Deposit Slip # field alphanumeric instead of numeric.

Current text in the guide:

2. Enter the optional Bank Deposit Slip #

Proposed replacement:

2. Enter the optional Bank Deposit Slip # (alphanumeric)

Edit 7 — GUIDE-014 (Deposits)

Section: *Edit Deposit Slip* — step 6 sub-bullets. **Citation:** NXT-58466 (resolved 2025-03-24)

Source — AC (verbatim):

* User can update the Deposit Slip Bank Number while editing

Current text in the guide:

6. Edit the information as needed

- Denominations

- Checks – Edit or Add a new check

Proposed replacement:

6. Edit the information as needed

- Denominations

- Checks – Edit or Add a new check
- Bank Deposit Slip Number — the user can update it while editing

Edit 8 — GUIDE-014 (Deposits)

Section: New section appended after *Edit Deposit Slip*. **Citation:** NXT-58466 (resolved 2025-03-24). *This ticket's Release Notes field points to NXT-56813 for the customer-facing notes (not present in this CSV row); AC is the only source quoted.*

Source — AC (verbatim):

- * Delete option added
- ** Confirmation prompt
- ** Locked to Delete CRUD permission
- *** Rolled out to Central Office, Director, SC Admin roles
- * Status available for viewing in both Grid and Details
- ** Can filter out deleted slips
- * History updated → we can use a comment:
- ** Deposit Slip deleted by {{UserFirst}} + ' ' + {{UserLast}} at {{Full Timestamp}}.
- * Deleted Deposit Slips are not included in rollups / reports
- * Linked Sessions moved out of Deposited (move to Reconciled)
- * User can still see deposit slip details of a Deleted slip

Current text in the guide: *(no equivalent — this is a new section)*

Interpretation note: AC's "Delete CRUD permission" uses dev-team shorthand (CRUD = Create/Read/Update/Delete). The customer-facing permission name is not stated in AC or RN; rendered generically as "the Delete permission" in the proposed text below.

Proposed new section:

Delete Deposit Slip

A Delete option has been added, gated by the Delete permission. The permission has been rolled out to the Central Office, Director, and SC Admin roles.

1. Select the Delete option

A confirmation prompt displays.

2. Confirm the deletion

The status is updated to Deleted. The History entry records "Deposit Slip deleted by <UserFirst> <UserLast> at <Full Timestamp>." Deleted Deposit Slips are not included in rollups or reports. Linked Sessions move out of Deposited (move to Reconciled). The user can still see the details of a Deleted slip.

The deleted-slip status is available for viewing in both Grid and Details, and the user can filter out deleted slips.

Open questions:

- Where exactly is the Delete option in the UI? (*Description: "From inside Deposit Slip Details" — not in AC.*)
- Customer-facing label of the Delete permission as shown in the role-permission admin UI.

Edit 9 — GUIDE-021 (Edit Checks)

Section: *View Edit Checks* — preface plus step 1 and step 3. **Citation:** NXT-58225 (resolved 2025-02-19)

Source — AC (verbatim):

- * Date Picker updated to match the one on the FOH Dashboard
- * Site Picker swapped out for multi-select
- * Comments window changed to a side drawer
- * Sessions link added to Edit Checks result grid
- * Option to do Edit Checks vs Reverse Edit Checks added
- ** Edit Checks is the default selection
- * User can go to the Sessions for the Site + Date in the grid.

Source — Release Notes (verbatim):

We have added an option to the Edit Checks page to allow for the configuration and searching of low meal counts. We're calling these Reverse Edit Checks.

Current text in the guide:

View Edit Checks

1. Select the Site Code/Site Name
2. Select the Date
3. Click the APPLY button

Edit Checks display in the table below.

Proposed replacement:

View Edit Checks

An option to do Edit Checks vs. Reverse Edit Checks has been added, with Edit Checks as the default. The Date Picker has been updated to match the one on the FOH Dashboard, and the Site Picker has been swapped out for multi-select.

1. Select the Site Code/Site Name (multi-select)
2. Select the Date
3. Click the APPLY button

Edit Checks display in the table below. The result grid now includes a Sessions link that lets the user go to the Sessions for the Site + Date.

Edit 10 — GUIDE-021 (Edit Checks)

Section: *Resolve Edit Checks* — step 2. **Citation:** NXT-58225 (resolved 2025-02-19)

Source — AC (verbatim):

* Comments window changed to a side drawer

Current text in the guide:

2. Click the Resolve/Comment icon for the desired Edit Check

The Edit Check Comments pop-up window displays.

Proposed replacement:

2. Click the Resolve/Comment icon for the desired Edit Check

The Comments window — now a side drawer — displays.

Edit 11 — *withdrawn* — GUIDE-021 / NXT-65306 (Attendance-driven Edit Checks)

Citation: NXT-65306 (resolved 2025-10-29)

Source — AC: - (literally a single dash; the field is empty).

Source — Release Notes: (*empty*)

Disposition: Withdrawn. Under the strict standard, a proposed claim must trace to a verbatim quote from AC or RN. Neither source is populated for this ticket. The earlier draft (a new "Attendance-driven Edit Checks" subsection) has been removed from the guide.

Open question / SME action: Ticket Description does describe a new system setting ("Edit checks for daily attendance counts?") and new exception types. If accurate, **the product owner should backfill AC** on NXT-65306 so the section can be re-proposed under the strict standard. Until then, this change is held back.

Edit 12 — GUIDE-022 (End of Day)

Section: Intro paragraph (daily-tasks list). **Citation:** NXT-65307 (resolved 2025-10-22). *Release Notes empty; AC is the only source.*

Source — AC (verbatim):

* End of Day task is available if:

** Attendance entry method is set to Daily

** At least 1 site is configured for SNP

- ** Task is toggled off by default
- * Other columns:
- ** Summary → Count: 123456 / Not Recorded
- ** Detailed → Leave blank
- ** Status:
- *** Not Started if no count has been entered
- *** Complete if any count, including 0, has been entered
- ** Actions:
- *** Record button
- *** User can record/edit the attendance count for the site+date
- * Task count increases if the task is turned on for EOD and FOH Dashboard

Current text in the guide:

The End of Day function is a self-management tool for site managers, allowing them to review and complete Daily Tasks. These Daily Tasks include Sessions, Marked for Review, Suspicious Transactions, Edit Checks, Serving Exceptions, and Deposit Slip. Also, the history for the individual task and the site and date can be viewed as needed. Reports can also be generated.

Proposed replacement:

The End of Day function is a self-management tool for site managers, allowing them to review and complete Daily Tasks. These Daily Tasks include Sessions, Marked for Review, Suspicious Transactions, Edit Checks, Serving Exceptions, and Deposit Slip. An additional End of Day task is available when the Attendance entry method is set to Daily and at least one site is configured for SNP; this task is toggled off by default. Once enabled, its Summary shows "Count: <n>" or "Not Recorded"; Status is Not Started if no count has been entered, and Complete once any count (including 0) has been entered. The task's action is a Record button that lets the user record or edit the attendance count for the site + date. The task count on EOD and the FOH Dashboard increases when the task is turned on. Also, the history for the individual task and the site and date can be viewed as needed. Reports can also be generated.

Open question: AC does not name the task's display label in the EOD UI. (*Description: "Attendance Count" — not in AC.*) AC also does not specify the UI control used to toggle the task on; the existing guide names the SETTINGS button as the on/off control for Daily Tasks generally, but applying that to this specific task is interpretation.

Edit 13 — GUIDE-026 (Charge Limits)

Section: *Edit Charge Limits* — new preface paragraph before step 1. **Citation:** NXT-54168 (resolved 2024-09-20)

Source — AC (verbatim):

- * User is informed if no charge limit exists / blank
- ** Text: No Charge Limit

* POS updated to treat charge limits not existing as a blank value. (no charge limit)

Source — Release Notes (verbatim):

We have updated the Charge Limits configuration page to clearly show when no charge limit has been set. Previously there was some ambiguity here; the text update is aimed to remove that.

Current text in the guide: *(no preface — section jumps directly to step 1)*

Proposed new preface (immediately under the heading, before step 1):

If no charge limit has been set (the field is blank), the page now displays the text "No Charge Limit". The POS treats a charge limit that does not exist as a blank value (no charge limit).

Open question: AC does not say how a \$0.00 entry differs from a blank value. *(An earlier draft contrasted the two; the contrast was interpretation and has been removed.)*

Edit 14 — GUIDE-029 (Add Menu Grids)

Section: *Menu Grid Info* sub-bullets in step 2 — bullet removed. **Citation:** NXT-54019 (resolved 2025-02-07)

Source — AC (verbatim):

* Is Template toggle removed from Layout

Source — Release Notes (verbatim):

We have added a 'Copy' action to the Menu Grids page. This will create an exact copy of the existing Menu Grid with a new name.

Current text in the guide (the bullet to remove):

- Click the Is Template toggle switch to save the Menu Grid as a template that can be used when creating future Menu Grids

Proposed change: *Remove this bullet entirely.* No replacement bullet needed. Copy functionality is documented in GUIDE-030 (Edit 15).

Edit 15 — GUIDE-030 (View and Modify Menu Grids)

Section: New section appended after *Delete Menu Grids*. **Citation:** NXT-54019 (resolved 2025-02-07)

Source — AC (verbatim):

- * Copy Menu Grid action added to Menu Grids grid
- ** User is prompted to name the menu grid
- ** Name must be unique for the district
- ** If name is fine, copy everything over to the new menu grid
- ** User is given a success message

Source — Release Notes (verbatim):

We have added a 'Copy' action to the Menu Grids page. This will create an exact copy of the existing Menu Grid with a new name.

Current text in the guide: *(no equivalent — this is a new section)*

Proposed new section:

Copy a Menu Grid

A Copy Menu Grid action has been added to the Menu Grids grid. It creates an exact copy of the existing Menu Grid under a new name.

1. Select the Copy action on the desired Menu Grid

The user is prompted to name the menu grid.

2. Enter a new name and confirm

The name must be unique for the district. If the name is acceptable, the system copies everything over to the new menu grid and gives the user a success message.

Open questions:

- The icon and hover text used to trigger Copy. *(Description: "Copy icon", hover "Copy Menu Grid" — not in AC or RN.)*
- Verbatim error text when the name is in use. *(Description: "The menu name is already in use. Please enter a new menu name." — not in AC or RN.)*
- Verbatim success-message text. *(Description: "Menu Grid copied successfully." — not in AC or RN.)*
- The explicit list of properties carried over by "copy everything over". *(Description names Meal Type, Enabled, Site Type, Days Allowed, row/column counts, button positions; AC says only "everything".)*

Summary
